Influence of softgel and powder glucsol (48 mg/day) on blood sugar levels in Type II diabetics. Note the rapid blood sugar reduction during supplementation and the slow recovery during Glucost washout.

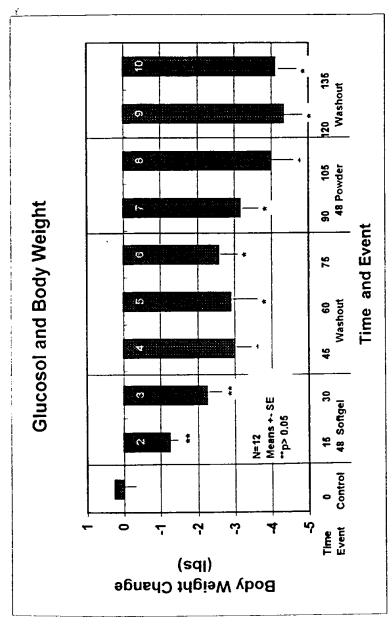

Inn,

,7

Blood sugar lowering affects of softgel and powder Glucosol. Both glucosol forms significantly (p60.01) lowered blood sugars in 15 and 30 days. The recovery time was delayed with both Glucosol forms.

8 m.

baseline weight for the powder Glucosol (day 75) was lower than that for the softgel formulation (day 0). Body weight changes before, during and after 48 mg/day of soffgel or powder Glucosol. Note the acute drop in weight during Glucosol supplementation and the slow weight gain during the washout intervals. The weight loss with 48 mg/day softgel or powder Glucosol was nor regained in six weeks. Thus, the

F1G, 5

Body weight change in Type II diabetics during supplementation with 16, 32, and 48 mg/day Glucosol™ only (no exercise or diet changes). Supplementation time for each dose was 15 days. Both the softgel and powder forms of Glucosol™ decreased body weight significantly at the 32 and 48 mg/day dosages. The difference between Glucosol™ forms was not statistically different.
